# V1.3发版复盘总结

## 开发

1. 和PM确认PRD中的设计文档哪些是必填字段、哪些是非必填字段、默认值是什么

2. 后续开发过程中，和前端约定，如果某个输入框为空，也必须传值，如desc=None

3. 开发过程中，对于model的编写，必须指明每一个字段是否为必填，默认值是什么

```python
class DOnlineBonusConf(DBaseDocument):
    brds = fields.ListField(fields.StringField(), null=True)
    chns = fields.ListField(fields.StringField(), null=True)
    plts = fields.ListField(fields.EnumField(PltType), null=True)
    risk_levels = fields.ListField(fields.EnumField(RiskLevel), null=True)

    effected_at = fields.DateTimeField(required=True)  # 生效时间
    status = fields.EnumField(OnlineStatus, default=OnlineStatus.WAIT)
    desc = fields.StringField()  # 规则描述

    operator = fields.StringField()
```

4. 确认需求的发版日期、测试日期，按照deadline及时推进前后端开发和联调

5. 对于使用项目开发过程中，使用get_text进行翻译时，需要指定lan为settings.LANGUAGE_CODE，否则get_text会默认翻译为中文或者英文，而不是对应国家的语言

```python
activity_center_service.update_activity(
    ActivityCenterCriteria(
        act_id=str(data_id),
        brds=cleaned_data.get("brds"),
        chns=cleaned_data.get("chns"),
        plts=cleaned_data.get("plts"),
        activity_name=get_text(
            msg_id=ActivityType.ONLINE_RAFFLE.value,
            lan=settings.LANGUAGE_CODE,
        ),
        activity_type=ActivityType.ONLINE_RAFFLE,
        risk_levels=cleaned_data.get("risk_levels"),
        enabled=True,
        effected_at=cleaned_data["effected_at"],
        expired_at=cleaned_data["expired_at"],
    )
)
```

默认的语言通过middleware设置

```python
class LocaleMiddleware(MiddlewareMixin):
    """
    Parse a request and decide what translation object to install in the
    current thread context. This allows pages to be dynamically translated to
    the language the user desires (if the language is available, of course).
    """

    _header_req_lan = "HTTP_ACCEPT_LANGUAGE"

    def process_request(self, request):
        clear_local_lan()
        raw_lan = request.META.get(LocaleMiddleware._header_req_lan)
        if not _RES:
            _LOGGER.error(
                "django i18n plugin : load_i18n_resource must be executed before the service starts"
            )
            return
        if not raw_lan:
            lan = settings.LANGUAGE_CODE
        else:
            lan = helper.parse_raw_lan(raw_lan)

        short_lan = helper.short_lan(lan)
        if short_lan not in _RES.get_all_lans():
            lan = _DEFAULT_LAN

        set_local_lan(lan)
        request.LANGUAGE_CODE = lan
```
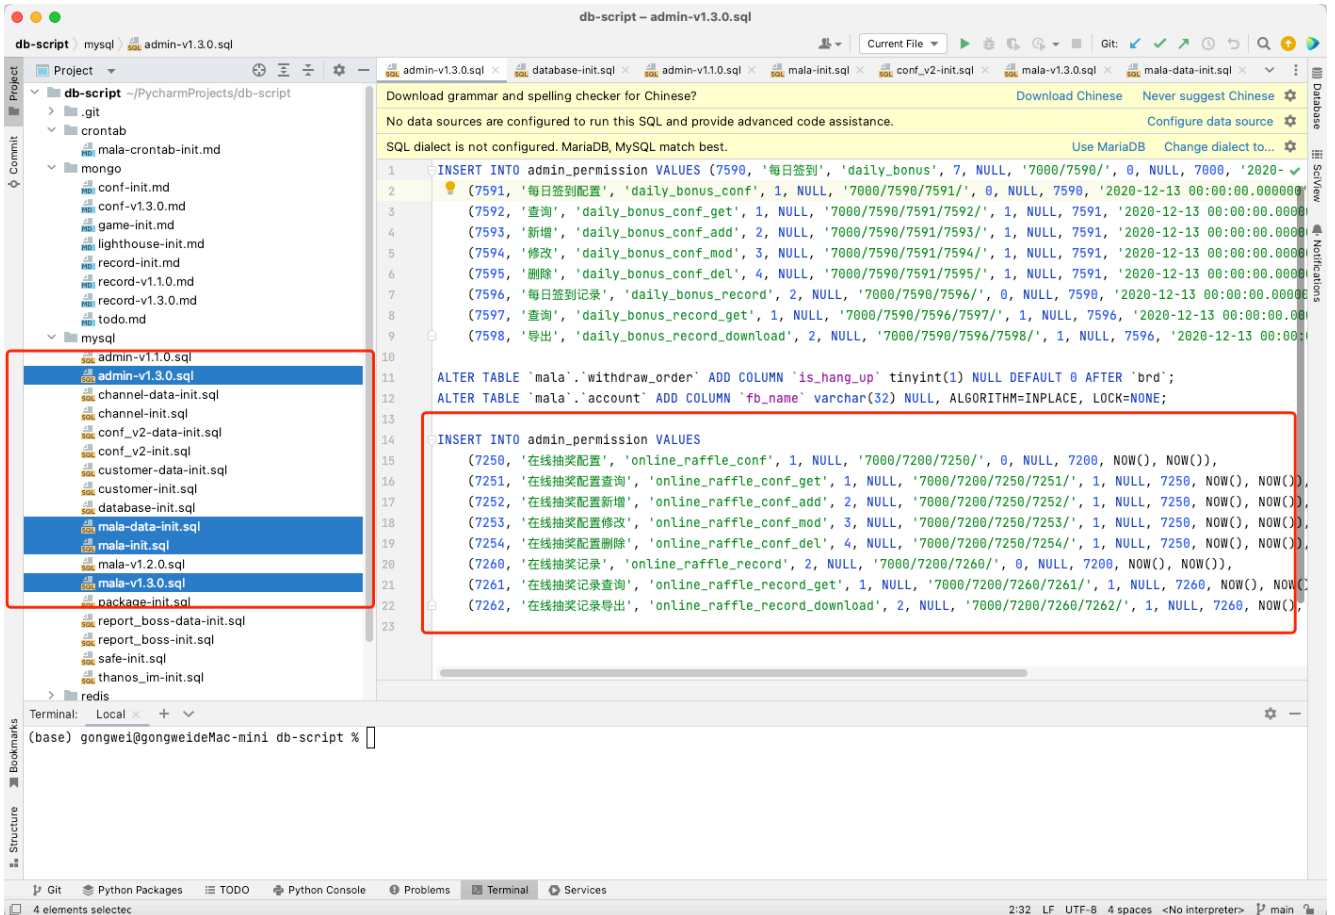

## 发版前

1. 发版前，确认db-script项目是否添加好对应需求的MySQL执行脚本

2. 确认个人分支代码是否合到版本分支

3. 本地启动版本分支，检查是否能正常运行

4. 及时通知PM去配置中心添加对应翻译

## 发版后

1. 发版后立即去日志平台或者对应的前端界面查看接口是否有相应的报错
